Leaf Free™
GUTTER GUARD

Get your
mind out of the
Gutter!™

Now you don't have to give gutters a second thought... thanks to the revolutionary **Leaf Free Gutter Guard™**.

We've thought long and hard about the best gutter protection system - in fact, we've had our mind in gutters for over 20 years!

Do I need gutter guards?

All new residential construction requires gutter protection systems to comply with building codes.

- If you live in a high fire danger environment you will require fire resistant gutter guards.
- If you harvest rainwater from roof top to water tank you'll need gutter guards to allow a cleaner, faster flow to the water tank.

- If you want to avoid blocked downpipes, rusting gutters and flooding roofs and you don't want to spend your weekends up a ladder scooping out debris from blocked gutters - then you'll want **Leaf Free Gutter Guard™**.

Why Leaf Free Gutter Guard™?

There are many gutter protection systems available, most requiring difficult, time-consuming & expensive installation and some that just don't do the job.

At Leaf Free we've done all the research & testing and developed a system that provides optimum results with the minimum effort! The high quality UV resistant anti-corrosive, small aperture woven mesh is CSIRO tested to ensure fire resistance and the patented high bond adhesive makes installation secure, hassle-free and fast. No drilling holes in roof tops, no brackets, no screws, no drama!

Leaf Free Gutter Guard™ excludes leaves and debris from the roof gutters, valleys and downpipes by creating a "ski-slope". The mesh literally extends the roof line to the gutter so the leaves simply blow down the roof line and over the edge of the gutters allowing

rainwater to flow freely along gutters and down pipes. Your tank can fill faster and your water is cleaner making **Leaf Free Gutter Guard™**

good for the environment and good for you too! Put simply - **Leaf Free Gutter Guard™** is easy to install, it works better & saves you time & money.

Will it fit on my roof?

Leaf Free Gutter Guard™ can be easily fitted to tile, corrugated and trim deck metal roofing. It can even be installed on bull-nosed roofs. **Leaf Free Gutter Guard™** can be installed by an accomplished home handyperson - but to be certain it is installed correctly and to ensure our product guarantee is valid, phone **Leaf Free Gutter Guard™** on **1300 30 70 15** for the name of a Certified Installer near you.
